

## VBS navodila »Car booking«

### 1. Prijava v VBS

Vstop VBS: vpis ID in geslo + potrditev splošnih pogojev

<https://vbs.luka-kp.si>

Slika 1: Prijavno okno

### 2. Najava za terminal avtomobilov (TA)

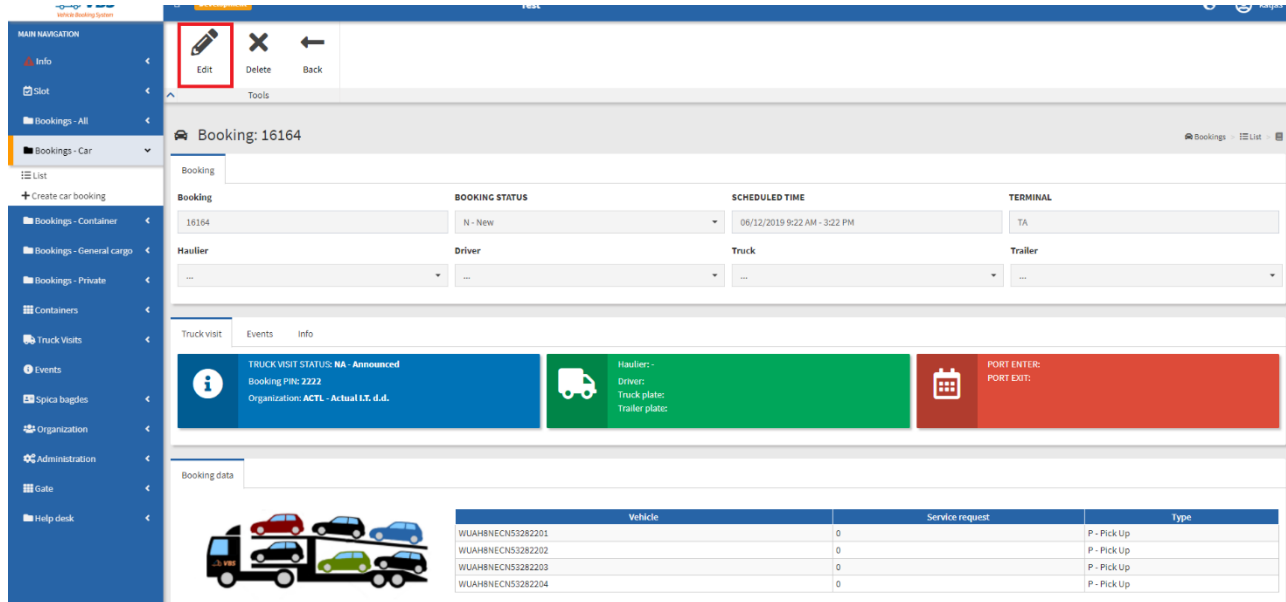

Špediter mora najprej vnesti najavo v sistem ACAR z želenimi termini prihoda kamionov. Nato planer Luke Koper potrdi najavo, ki se avtomatsko prenese v špediterjev VBS. Kreira se najava s PIN številko, ki identificira termin vstopa kamiona. Status najave je v tej fazi »NEW« oziroma »NOV«. Najave so prikazane na seznamu, ko kliknemo »Bookings – Car« -> »List« (slika 2 spodaj).

Slika 2: Seznam izdelanih najav

V statusu »NEW« lahko s klikom na izbirno tipko v drugem stolpcu (oko) izberemo posamezni »Booking«, ki ga lahko pregledamo in uredimo s klikom na »Edit« (slika 3).

Slika 3: Okno za pregled najave

Z funkcijo »Edit« se odpre okno v katerem lahko najavo uredimo s potrebnimi podatki, torej špediter doda prevoznika, voznika in registrsko številko kamiona/prikolice (v kolikor vse te podatke ima) in shrani (slika 4).

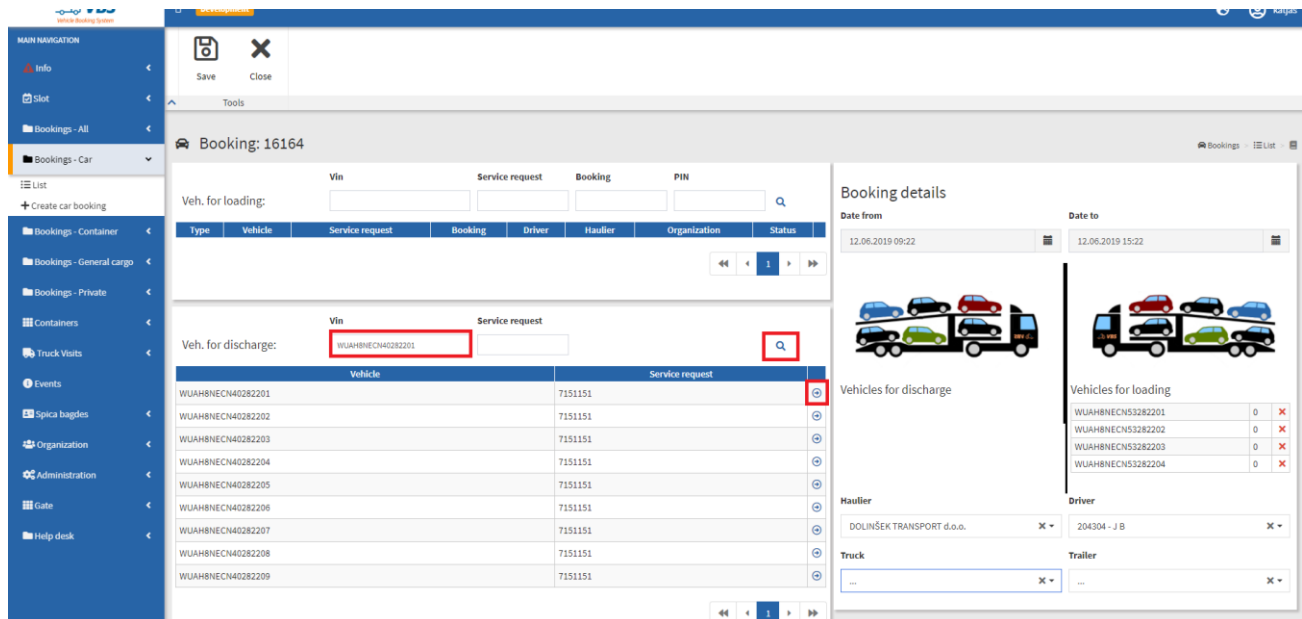

Slika 4: Urejanje najave prvi del

V kolikor špediter na »Bookingu« določi samo prevoznika in potrdi s tipko »Save«, postane »Booking« viden v VBS aplikaciji izbranega prevoznika pod statusom »Reserved«. Ko špediter ali prevoznik na »Bookingu« določi še voznika in prevozno sredstvo, preide »Booking« v status »Booked«. Najava vstopa je tako zaključena.

### 3. Pregled in urejanje najav za terminal avtomobilov (TA)

Z ponovnim klikom na »Edit« lahko prevoznik na obstoječi »Booking«, v tem primeru imamo le naklad vozil – loading, doda še vozila drugega naročnika, katera se bodo v tem primeru razkladala. Seznam vozil uvozi z vpisom ID številke enega vozila in potrdi iskanje s povečevalnim steklom. Vozila dodeli s klikom na puščico v desno na kamion ter »Booking« shrani (slika 5).

Slika 5: Urejanje najave drugi del

Prevoznik lahko ob prejetih dveh »Bookingih« različnih špediterjev za razkladanje in naklad vozil v istem dnevu, uporabi opcijo »Merge«, ki združi dva »bookinga« v enega (slika 6).

The screenshot shows the VBS Booking List interface. A red box highlights the 'Merge' button in the 'Create Tools' section. Below the navigation menu, there are search and filter options for Status, Pin, Haulier, Time from, Time to, and Vin. A table of bookings is displayed with columns for Type, Status, Pin, Booking, Organization, Scheduled time, Haulier, Driver, Truck, and Trailer.

Type	Status	Pin	Booking	Organization	Scheduled time	Haulier	Driver	Truck	Trailer

Slika 6: Združevanje dveh najav

Zavihek »Events« pa nudi prevozniku pregled nad vstopom in izhodom kamiona iz pristanišča, torej kdaj je vstopil/izstopil, kateri kamion ter na katerem vhodu. Tako ima lahko vse pod kontrolo.

The screenshot shows the VBS Events interface. A table displays truck arrival and departure events with columns for Badge, PIN, Status, Truck Plate, Trailer Plate, Event date, Gate status, and Lane. Below the table, there is a 'Booking data' section with a truck icon and a table listing vehicle details, service requests, and types.
